## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Takahashi et al (US Patent 4,345,943) or lijima et al (Japanese patent 359016952A).

The abstract of each patent discloses an iron alloy composition having constituents whose wt% ranges overlap those recited by the claim; such overlap renders applicant's composition prima facie obvious despite differences in non-overlapping areas, see In re Malagari, 182uSPQ and MPEP 2144.05

More specifically, note that the English abstract of JP'952 discloses an iron-based sintered material containing carbides dispersed in the matrix at a density ratio of above 92% which overlaps with applicant's claimed range of 95% or more; and the sintered material is used as structural element for mining machinery, which would include engine components, such as a turbo component.

Even though Takahashi does not disclose a carbide density ratio of 95% or more, such would be expected in view of overlap in composition, see MPEP 2112.01 and In re Best, 195USPQ430. Also similar to the present invention, Takahashi on lines 36 to 50 of column 4 teaches Cr carbides are formed to improve abrasion resistance.

Application/Control Number: 10/046,677

Art Unit: 1742

Page 3.

and lines 5 to 10 of column 1 teaches using iron-based sintered alloy in manufacturing components for internal combustion engines, which would include turbo parts.
